1 Introduction

2 NexusForum Security Framework

This section presents the comprehensive security framework consisting of six layers integrated with five security verticals.

2.1 Security Layers

1. **Orchestration** - Central coordination and management
2. **User** - User identity and access management
3. **Application/Service Centric Security** - Application and service-level security controls
4. **Data Centric Security** - Data protection and privacy controls
5. **Software/Middleware/OS Centric Security** - Operating system and middleware security
6. **Device/Hardware Centric Security** - Physical device and hardware protection

2.2 Security Verticals

1. **Network** - Network infrastructure and perimeter security
2. **Automation and Cyber-Resilient AI Lifecycle** - Automated security processes and AI integration
3. **Dynamic Risk Management & Operational Cyber Resilience** - Risk assessment and incident response
4. **Interoperable Security Mechanisms** - Cross-platform security standards and integration
5. **Agile Governance, Compliance-by-Design & Automated Assurance** - Governance and compliance automation

2.3 Security Framework Matrix

Layers / Verticals	Network	Automation & AI	Risk Mgmt	Interoperable	Governance
Orchestration	✓	✓	✓	✓	✓
User	✓	✓	✓	✓	✓
Application/Service	✓	✓	✓	✓	✓
Data Centric	✓	✓	✓	✓	✓
Software/Middleware/OS	✓	✓	✓	✓	✓
Device/Hardware	✓	✓	✓	✓	✓
